

ABSTRACT OF THE DISCLOSURE

A receiver for use in a vehicle for communicating between an actuator and a remote device includes an antenna and a controller.

The actuator is disposed within the vehicle for controlling the

5 operation of a vehicle feature. The antenna receives a wireless signal generated by the remote device and including a control command. The controller is coupled to the antenna. The controller is configured to enter a training mode of operation wherein the controller polls a plurality of wireless frequencies to detect the
10 wireless signal. The controller is configured to receive and interpret the control command on the wireless signal. The controller is further configured to communicate the control command to the actuator for execution.
